To whom it may concern,

Dysinger Incorporated has demonstrated an exceptional track record of growth and contribution to the space, aerospace, and defense industries. Over the past year, we have achieved an impressive 500% growth with our largest space and defense account and anticipate similar growth in 2024 and beyond. Our company is a trusted and highly qualified precision machining supplier, addressing a critical need in the defense supply chain, where a shortage of qualified suppliers has been a significant challenge.

We are proud to report that Dysinger Incorporated currently generates approximately \$8,000,000 in annual revenue primarily serving the space and defense sector, making a substantial economic impact on the Dayton region. We invested over \$1,000,000 in modern cnc machinery in 2023 and need to invest another \$1,000,000 to satisfy our current demand. However, our growth potential is limited by our ability to fund our expansion. We are seeking government funding to help overcome this barrier, allowing us to continue our impressive growth trajectory, create jobs, and further support the vital space, aerospace, and defense supply chain. Your support will not only benefit our company but also increase Dayton's share of the space and defense supply chain while contributing to the overall success of these crucial industries.

Thank you for your consideration.

David Dysinger
